

WEBINAR: 80% PET RECYCLATE NATIONAL CIRCULAR ECONOMY BEST PRACTICE

27th April 2020

10.00 o'clock CET/ 11.00 EET

What is soon going to be implemented in more countries, has been a Swedish practice for many years. **Door-to-door recycling facility** and right of first refusal of the PET recyclate for the producers in the deposit scheme secures most **cost efficient** and **environment friendly** packaging waste management nationally. Already today, the Swedish model results with **80% supply of the PET recyclate** exceeding by far the minimum of 30% required by SUPD in 2030.
