

## Deposit Return Systems Fact Sheet: Handling Fees

In an effort to reduce litter and increase recycling, a growing number of jurisdictions are establishing deposit return systems (DRSs) for the recovery of beverage containers. These programs add a small fee to the purchase price of certain beverage containers, which is returned to the consumer when he/she returns the empty container to a designated collection point for recycling and/or reuse.

This fact sheet will focus on how DRSs finance collection. DRSs offer unit handling fees, which is an amount paid to retailers or redemption centers as compensation for collecting, sorting, and packaging empty beverage containers to be taken back to the bottler or distributor. On a long-term basis, handling fees also cover expenses related to investments in reverse vending machines (RVMs), electricity costs, space requirements, and additional personnel required to handle the containers. The fee is often paid by the bottler or distributor, system operator, and in some cases is paid by the state (e.g. California).

The presence of a handling fee is a critical part of what makes DRSs work and makes them financially attractive for retailers or redemption centers. In jurisdictions where handling fees have remained the same for decades, the level of compensation provided to retailers/redemption centers is often not enough to cover the cost of managing the containers, which has forced some to go out of business.

Like deposits, handling fees can vary by container type. They can also vary based on the type of facility that receives the containers (i.e. redemption center or retailer), whether containers are commingled, compacted, and whether collection is done manually or automatically using RVMs.

In order to provide an understanding of how the different systems work, Table 1 provides a summary of handling fees paid to retailers and redemption centers in as many jurisdictions that we could get our hands on. In some jurisdictions, such as British Columbia (Canada), handling fees are privately negotiated and proprietary, and therefore are not publicly available. In general, handling fees paid to stand alone redemption centers or “depots” which are more commonplace in Canadian and American programs, are much higher because they must compensate the entire costs of the facility and labour. Retail fees are significantly lower because the costs represent only a marginal cost increase for the retail store, in terms of dedicated space, labour, etc.

Table 1: Handling Fees in DRSs Around the World

Reloop is a broad platform of like-minded interests that share a common vision for a circular economy. The founding members of the organisation bring together industry, government, and non-governmental organisations to form a network for advances in policy that create enabling system conditions for circularity across the global economy. With members coming from different sectors, the platform aims to work as a catalyst in order to generate economic and environmental opportunities for all stakeholders in the value chain. This includes producers, distributors, recyclers, academia, NGOs, trade unions, green regions, or cities.
