

## Reloop's 2022 Global Deposit Book – Social Media Kit

Reloop's latest report, *Global Deposit Book 2022: An Overview of Deposit Return Systems for Single-Use Beverage Containers*, provides a comprehensive summary of over 50 deposit systems that are currently in place—as well as those scheduled to be implemented by the end of this year—in Europe, North America, Central America and the Caribbean, Africa, the Middle East, Asia, and Oceania.

The report shows that global interest in DRS continues to grow, and that by the end of 2026, around 748 million people could live in jurisdictions with DRS, more than double the population covered as of the end of 2022.

“The fact that no other method of collection can effectively recover 90% of beverage containers for closed-loop recycling explains why governments around the world have shown a renewed interest in DRS,” says Clarissa Morawski, CEO and co-founder of Reloop. “By enabling the collection of high volumes of top-quality, colour-sorted material that can be directed into closed-loop recycling applications again and again, these systems deliver bountiful circularity by allowing us to produce new containers from used containers multiple times.”

Clarissa\_quote1.png

“

"The world faces a severe climate crisis. At the same time, a waste crisis is unfolding as we face unprecedented demands to reduce our dependence on virgin resources.

The scale and urgency of these dual crises means that we no longer have the luxury of waiting to take action. Now is the time to implement proven solutions that will help meet our climate mitigation and waste prevention objectives.

Deposit return systems are a proven solution."

Clarissa Morawski, CEO & Co-founder

#GlobalDepositBook

Clarissa\_quote2.png

“

The Global Deposit Book reveals that more and more governments are realising the need for deposit return systems to address the massive crisis in wasted containers, too many of which end up as litter.

By enabling the collection of high volumes of top-quality, colour-sorted material that can be directed into closed-loop recycling applications, these systems deliver bountiful circularity by allowing us to produce new containers from used containers multiple times.

— CLARISSA MORAWSKI, ReLoop CEO & Co-Founder

#GlobalDepositBook

Clarissa\_quote3.png

“  
Deposit return systems are a proven solution that are not only good for the environment, but that also create jobs and economic opportunities.

reloop PROLOGOS REMAIN PROLOGOS

Deposit\_definition.png

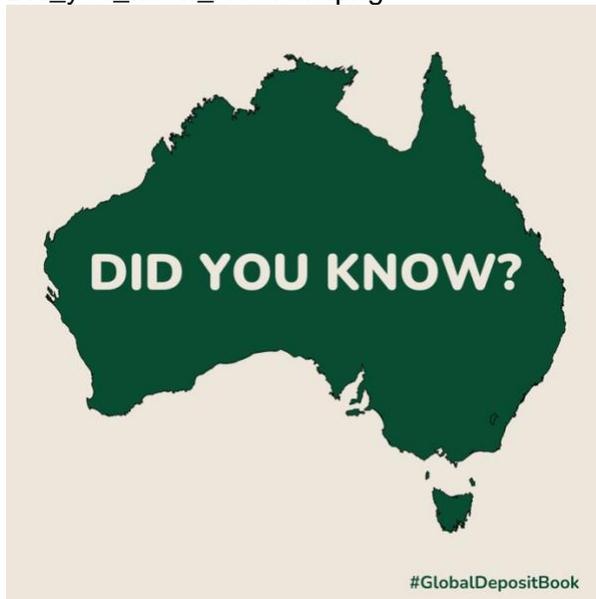

# Deposit

/də'pɒzət/ noun.

A sum of money that is charged on applicable beverage containers at the point of purchase, which retailers are required to collect from consumers. Intended to function as an incentive to recycle, it is refunded when the consumer returns the empty container to an authorised redemption centre/depot or retailer for recycling.

Did\_you\_know\_Australia.png

US\_average\_return\_rate.png

GLOBAL DEPOSIT BOOK 2022

**DID YOU KNOW?**

The average return rate for single-use beverage containers in US states with deposit return systems (DRS) is 65%.

In European countries with DRS, the average is 90%.

reloop

65

California\_expansion.png

Starting January 1, 2024, California's Bottle Bill will expand to include wine and spirits containers.

This is expected to boost the state's beverage glass recycling rate while bringing in cleaner glass for closed-loop recycling.

reloop

#GlobalDepositBook

Litter\_reduction.png

One of the main benefits of deposit return systems—and one that cannot be accomplished without them—is litter reduction.

Attaching a monetary value to beverage containers, in the form of a refundable deposit, decreases the likelihood that they will be littered in the environment, as consumers will be motivated to return them for recycling to claim the refund.

Learn more about the benefits of deposit return systems in our latest report. #GlobalDepositBook.
